

Admonter Indoor Climate Chart

Maintaining the perfect Indoor climate through temperature and humidity control is not only important for our health and well being, but also for the longevity and performance of your ONDO natural floor.

To help achieve this optimal climate zone in your living spaces, we have created an “Indoor Climate Chart” outlining temperature and relative humidity ranges.

By keeping within the Optimal Climate Zone, you will minimize the risk of gaps and swelling occurring in ONDO floors. Minimising this indoor climate stress will help to ensure you experience many years of trouble-free enjoyment from your Ondo floors.
